

Rethinking data requests via on-demand tools

Christina Butler, Assistant Director
Tufts University Office of Institutional Research

45th NEAIR Annual Conference, Pittsburgh, PA
November 5, 2018

About Tufts OIR

- Tufts University
 - Private research university
 - Undergraduate, graduate, and professional students
 - Approximately 11,500 students
- Office of Institutional Research
 - Under the Provost's Office
 - 10 staff members

Primary Functions

- Core OIR Activities:
 - Survey research
 - Fact Book
 - Data requests and short-term projects
 - Business intelligence and data integrity
 - Mandated reporting & accreditation
 - University-level undertakings
 - Service to the university
 - Knowledge dissemination and service to the profession

Demand for Data

- Increases in demand for data has changed the scope of our work
 - Survey research demand remains high
 - Large increase in need for university-wide dashboards and on-demand data
 - New clients in financial-related divisions
- Requests for information often last-minute and urgent

Data Requests

- No formal data request system – requests usually come in via e-mail, both to the Director and to individual staff
- Have a rotating Data Request List to distribute requests
- Around 150 ad-hoc data requests logged each year
- Additional 5-10 large “data projects” also done each year

The Old Approach

- Once project is assigned to a staff member, timeframe is dependent on client's needs and staff member's workload
- Staff members' experience levels vary
- Documentation inconsistent across projects
- Multiple copies/versions of data sources being made
- Duplication of efforts high within the office

A New Approach

- Reviewed historical project data
 - Many internal requests asking for similar data
 - Identified most-frequently requested metrics
- OIR needed to be proactive; reactive wasn't working

Tableau

- Interactive data visualization tool
- Capacity to create dynamic, user-friendly reports
- With the Tufts Tableau Server, end-users can access dashboards securely through a web browser
- Use of Tableau rapidly expanding across the university so familiarity with the software is increasing

Data Sources

- In order to proactively respond to data requests, we needed easily accessible, universal data sources
- Tableau data sources are being developed with the following features:
 - Built-in calculations
 - Clean data
 - Daily refreshes
 - Easy to understand variable names
 - Data dictionary

Dashboard Design

- Critical that self-service tools be easy to use
- Consistent “look and feel” across dashboards
- Footnotes and other data notes available for all reports
- Reports are designed to be printed or saved as PDF versions if needed

Fall Enrollment Calculator

Fall Enrollment Calculator

Report Specifications	Enrollment Report	Glossary
-----------------------	-------------------	----------

To calculate enrollment, please select your parameters from the following dropdown menus. Once you have finished making your selections, click on the arrow to "Calculate Enrollment." You will then be taken to your custom enrollment report where you will have the capability of splitting enrollment by various subcategories.

By default, the dropdown menus are set to include all enrolled students as of the most recent fall term. The official fall enrollment reporting date is October 15th of the selected fall term. By definition, an enrolled student is active/not-withdrawn at Tufts as of October 15th of the selected fall term and enrolled in at least one course for credit.

Select a Fall Academic Term:
Fall 2017

Select Degree-Seeking Status:
All (both degree seeking and non-degree seeking)

Select Campus(es):
(All)

Select School/Divison(s):

Enrollment Comparison by Undergraduate Major

	Spring 2013	Spring 2014	Spring 2015	Spring 2016	Spring 2017	Spring 2018
Total Headcount	209	351	462	508	590	572
% change from prior year		67.9%	31.6%	10.0%	16.1%	-3.1%
% change from first year	0.0%	67.9%	121.1%	143.1%	182.3%	173.7%

Unduplicated headcount of students enrolled in an AS&E undergraduate major within the listed department/programs. Includes first, second, and third majors. Enrolled students include those students who are active in their program, not withdrawn, and have an academic load greater than no units. Students studying in non-Tufts Study Abroad programs are excluded from the enrollment counts.

Admissions Dashboard

Slate Graduate Admissions Dashboards Table of Contents

Historical Admissions Trends

This dashboard displays historical admissions trends by school. Only data from completed admissions rounds are displayed. The view can be filtered by degree type and academic plan. Users can select from five admissions metrics: total applications, total accepted applications, total enrolling applicants, admit rate, and yield.

[GO TO REPORT](#)

Total Submitted Applications

The top view in this dashboard displays compares the running total of submitted Slate applications for the current academic year to the prior academic year. A year covers the time period between September 1 and August 31. The total applications is based on the date the application was submitted in Slate. The view can be filtered by degree type, academic plan and application status.

The bottom view in this dashboard displays a break down of total submitted applications by month. Selecting a month in the top line chart will filter this view to a specific month. The data can be further broken down by academic plan, degree type, and admissions round.

[GO TO REPORT](#)

Total Applications by Admissions Round

This dashboard displays the total applications to-date, by admissions round. The selected admissions year will be compared to the prior admissions year. The view can be filtered by degree type, academic plan and admissions round. By selecting on a specific round in the view, a chart will appear at the bottom of the dashboard. This chart breaks down the application data for the specific round by academic plan.

Applications (#) by Degree type

Refreshed from data warehouse on 10/27/2018 5:19:28 AM

For internal use only. This chart shows the Applications (#) for ([redacted]). Numbers in this report may differ from official/published admissions statistics and may not reflect [redacted]'s total admissions information. Only applications with a status of "Decided" and a valid decision code in Slate are included. See "Notes" page for additional school-specific exclusions.

Admissions offices may use this form to provide additional context for their data:

Running Total of Submitted Applications*

Current Academic Year vs. Prior Academic Year
Refreshed from data warehouse on 10/27/2018 5:19:28 AM

Select a school: [Redacted] ▼	Filter by application status: (All) ▼
Filter by degree type: (All) ▼	Filter by academic plan: (All) ▼

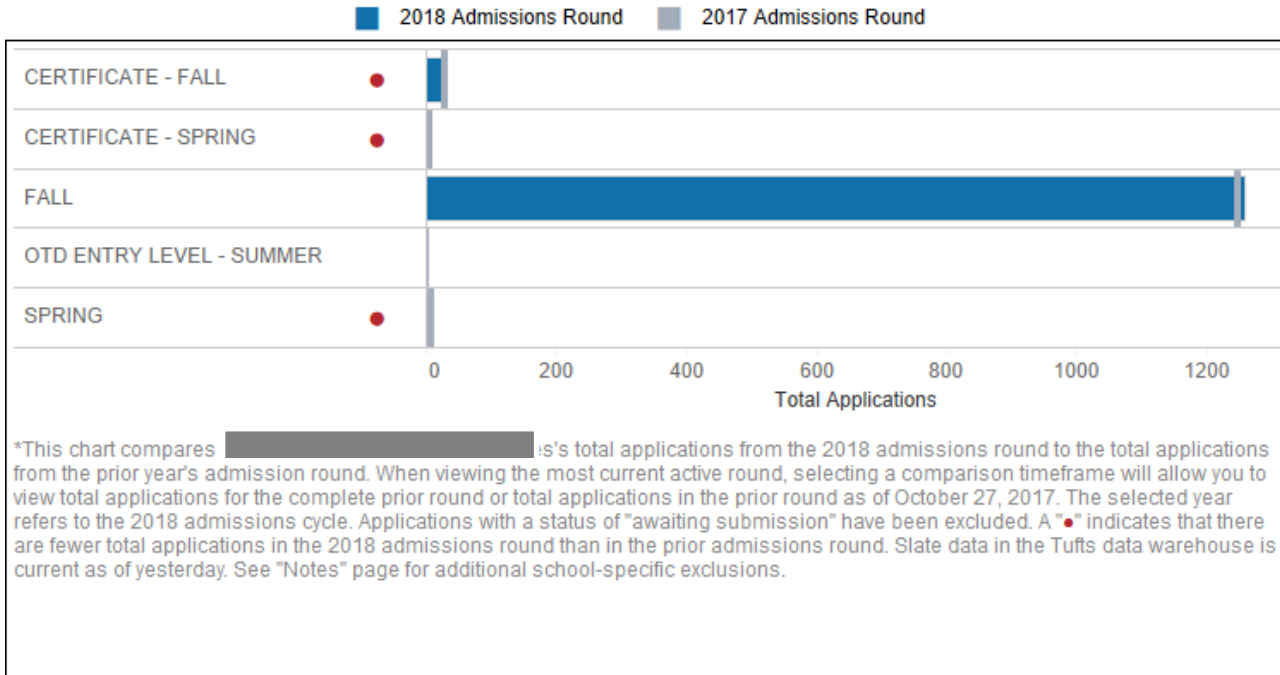

*This chart compares the running total of Slate applications for the current academic year to the prior academic year. A year covers the time period between September 1 and August 31. Applications with a status of "awaiting submission" have been excluded. The total applications is based on the date the application was submitted in Slate. See "Notes" page for additional school-specific exclusions.

Total Applications by Admissions Round*

2018 Admissions Round vs 2017 Admissions Round

Refreshed from data warehouse on 10/27/2018 5:19:28 AM

Select a school: <input type="text"/>	Select an admissions year: 2018	Select a comparison timeframe: Total apps from complete prior admissions ...
Filter by degree type: (All)	Filter by academic plan: (All)	Filter by admissions round: (All)

Selecting a bar on the above chart will provide additional details below about the round selected.

Admissions offices may use this form to provide additional context for their data:

Reception

- “This is so awesome”
- “...it is incredibly helpful and intuitive”
- “This is really amazing and is going to transform the way we work. I really look forward to playing with it!”
- “You have no idea how much access to these dashboards will free up time for all of us.”
- “It's going to be so helpful to us- we have been trying to track this information without a formal system in place. [Our administrator] has been doing lots of manual counts!”

Future Projects

- Expanding/improving existing reports
 - University-wide real-time enrollment reporting
 - Incorporating additional data sources into Admissions Dashboard
 - Adding more survey data into Program Review Dashboard
 - Connecting to new faculty information system for Deans' Data Hubs
- External completions reporting tool
- Integrated enrollment/finance reporting mechanism in collaboration with the newly formed Enrollment Council
- Modernizing Fact Book
