

Meeting Demand Through Process Improvement

Christina Butler, Assistant Director

Tufts University Office of Institutional Research

46th NEAIR Annual Conference, Newport, RI

November 4, 2019

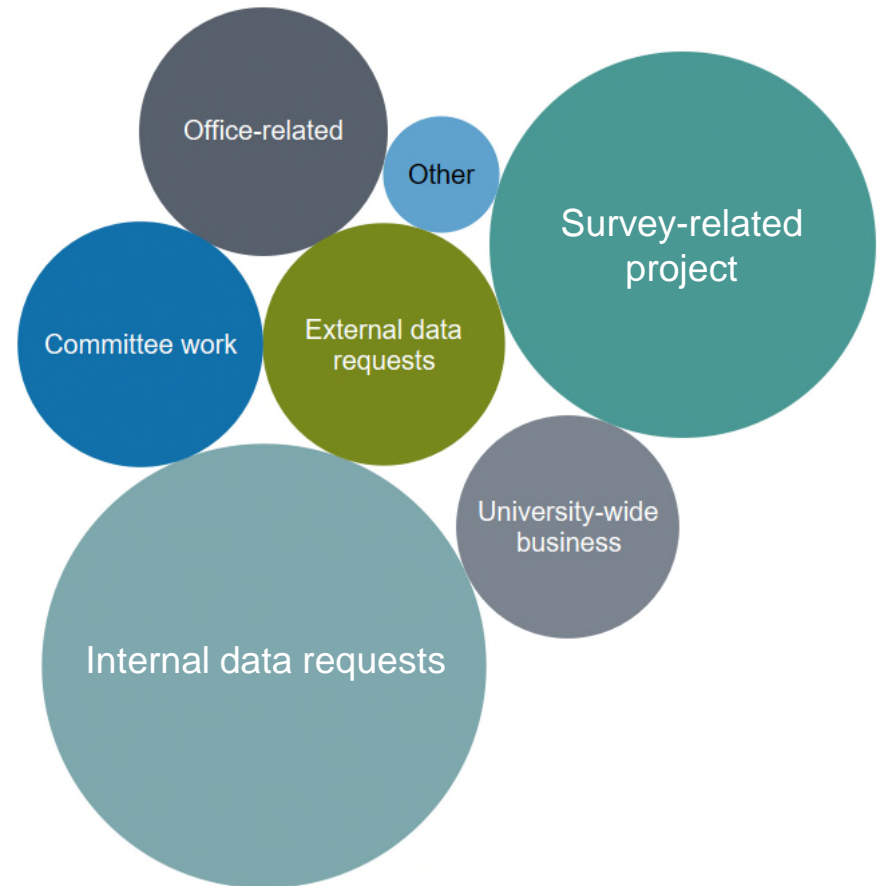

About Tufts OIR

- Tufts University
 - Private research university
 - Undergraduate, graduate, and professional students
 - Ten schools
 - Approximately 11,800 students
- Office of Institutional Research
 - Under the Provost's Office
 - 9 staff members

Core OIR Activities

- Survey research
- Internal and external data requests
- Mandated reporting & accreditation
- University- and school-level dashboards
- Fact Book
- Committee work

Survey Projects

- In 2018-19, OIR logged nearly 100 survey related projects
 - Design, administer and analyze 40-50 surveys per year
 - Survey consulting
 - Longitudinal analysis
 - Ad hoc reporting
- Summary reports are generated for all surveys OIR administers

Data Requests

- In 2018-19, OIR completed approximately 170 data requests
- Additional 5-10 large “data projects” also done each year
- Range from simple requests completed in less than an hour to projects requiring several months to complete

Data Demands at Tufts

- Demand for data at Tufts has significantly increased over the past 5 years
 - Requests are more complex and more frequent
 - Financial challenges have led to a greater need for “live” data
- As other offices become overwhelmed with data requests, they turn to OIR for help
- Multiple offices provide data support to university stakeholders

Data Challenges

- No formal data governance program
 - Unregulated data access
 - Inconsistent data definitions
- Decentralized university
 - 8 Registrars and Admissions Directors
 - Schools have autonomy when selecting application systems
 - Varied business processes
- Significant turnover in senior administration

Risks of Unmet Demand

- When OIR cannot meet its demand, this does not prevent others from acquiring data elsewhere
 - Offices have started hiring their own data analysts
 - Same requests are made to multiple offices
- This increases the risk of unintended negative outcomes
 - Data breaches
 - Inconsistent reporting
 - Privacy violations
 - Misinterpretation of information

OIR Process Improvement

- To continue operating as a leading resource for information on campus and minimize the aforementioned risks, our IR office has focused its efforts on three main areas:

Self-Service Tools

Documentation

Process Automation

Self-Service Tools

- Our office has been able to reduce the number of data requests by providing tools that allow clients to access information on demand

Fall Enrollment Calculator

Report Specifications | Enrollment Report | Glossary

To calculate enrollment, please select your parameters from the following dropdown menus. Once you have finished making your selections, click on the arrow to "Calculate Enrollment." You will then be taken to your custom enrollment report where you will have the capability of splitting enrollment by various subcategories.

By default, the dropdown menus are set to include all enrolled students as of the most recent fall term. The official fall enrollment reporting date is October 15th of the selected fall term. By definition, an enrolled student is active/not-withdrawn at Tufts as of October 15th of the selected fall term and enrolled in at least one course for credit.

Select a Fall Academic Term:
Fall 2019

Select Degree-Seeking Status:
All (both degree seeking and non-degree seeking)

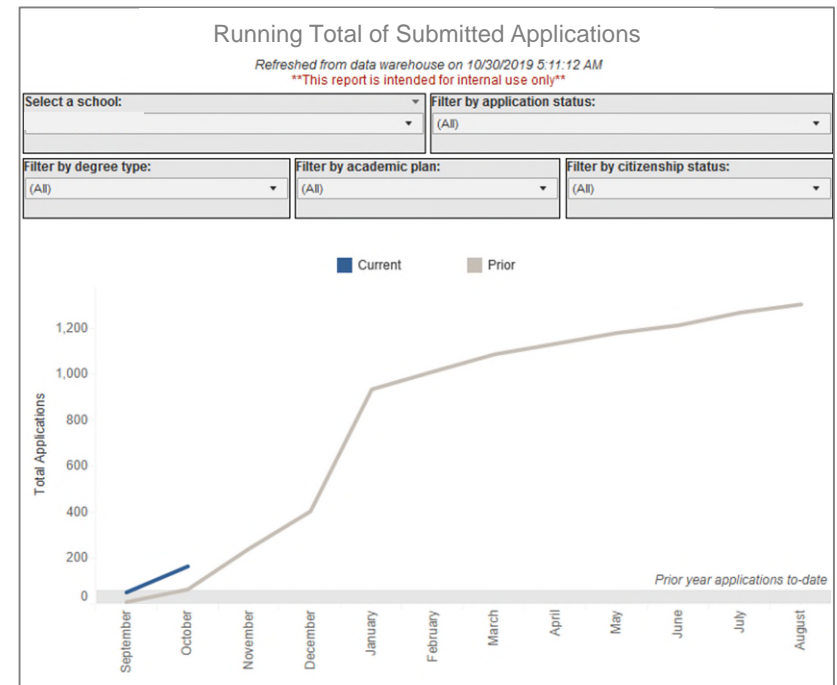

Select Campus(es):
(All)

Select School/Division(s):
(All)

Select Student Level(s):
(All)

Select Degree Type(s):
(All)

Calculate Enrollment 

Deans' Data Hub Table of Contents

Arts & Sciences

Admissions Trends

This dashboard provides trends data for various admissions metrics. The dashboard can be filtered by school, subdivision, degree type and academic plans and can be further broken down by various sub-categories. Trends data are updated each fall for completed admissions cycles.

For "live" admissions data, graduate schools using Slate can access the Slate Graduate Admissions Dashboard:
https://tableau.uit.tufts.edu/#/site/IR/views/SlateGraduateAdmissions_0/TableofContents

Enrollment Trends

This dashboard shows trends in student headcounts over time. The dashboard can be filtered by school, subdivision, academic year, degree type and academic plans and can be further broken down by various sub-categories.

Course Registration Trends

This dashboard shows trends of classes and enrollments over time. The dashboard can be filtered by school, academic year, and type of class.

Degrees Awarded Trends

This dashboard shows trends of graduating students over time. The dashboard can be filtered by school, subdivision, academic year, degree type and academic plans and can be further broken down by various sub-categories.

Research Doctorate Graduation Rates & Time to Degree

This dashboard shows completion rates and median time-to-degree for Tufts' doctorate programs. The dashboard can be filtered by school and academic plans.

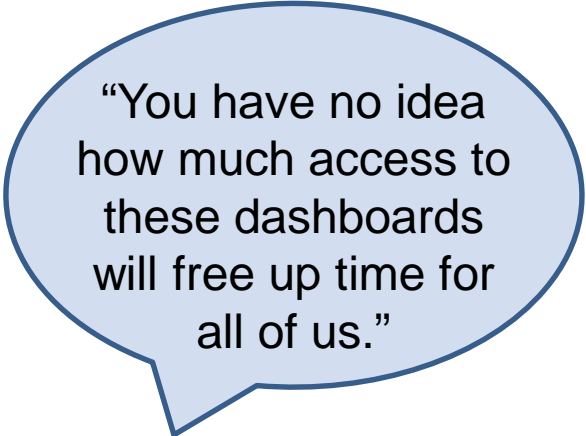

Academic Analytics

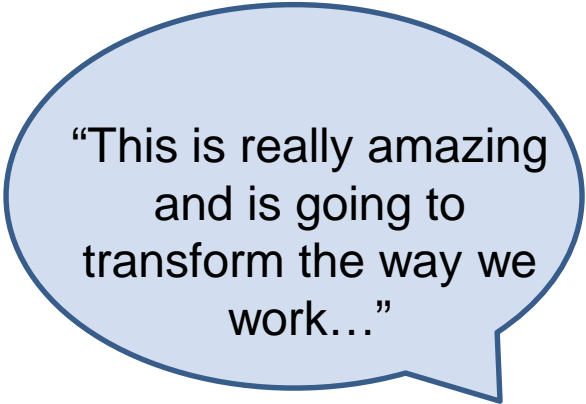

The below link redirects users to school-level dashboards created by Academic Analytics. These are separate reports external to the Deans Data Hub and are updated annually by Academic Analytics. Users must have access to Academic Analytics in addition to the Deans' Data Hub to access these reports.

Key Outcomes

- About 500 views to Fall Enrollment Calculator in the past year
- Data analysts now have on-demand access to clean, user-friendly data sets
- Several dashboards are accessed regularly by multiple users; many with more than 1000 views in the past year

“You have no idea how much access to these dashboards will free up time for all of us.”

“This is really amazing and is going to transform the way we work...”

Documentation

- Improving the office's documentation helps us provide more consistent and timely information to stakeholders
 - Documentation required for all projects
 - Internal data dictionaries
 - Improved footnotes and annotations
 - Standardized office file storage
 - Templates for documenting processes
 - Training guides for student research assistants

Is this project complete and ready for final billing?

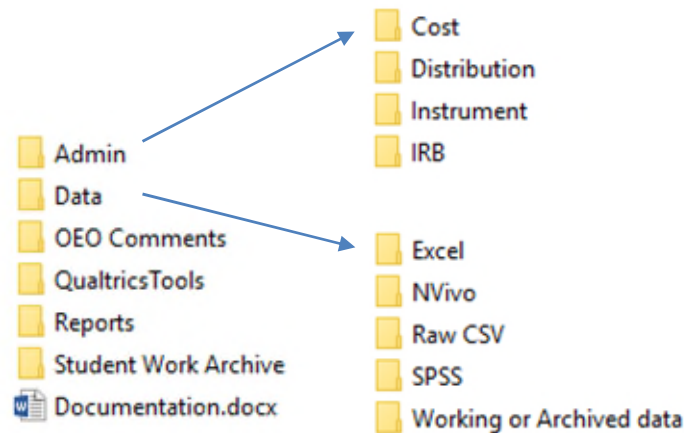

- Project is complete
- Project is ready for final billing
- Project documentation complete

Standardized File Storage

- Documentation folder

- Standardized folder structures

Documentation Templates

Documentation

Goal is: Reading through will give you all the information you need to know about what was requested, how the request was done, how to update in the future

Background information

- Requestor Name
- Requestor Title
- Date requested
- Date due
- Date Completed
- What is requested? Why is it being requested (if available)?
- Is this request for internal or external purposes?
- If external, what purpose:
- If external, are definitions/instructions available? (If yes, save in Documentation/ Communication folder)
- Is this or will this be a recurring report?
- If recurring, is there any relevant history?

Data Source Used

- Describe data source used

Method/Process

- Describe method/process to come up with final numbers.
- Describe all manual data manipulations in enough detail that they can be recreated
- Steps for updating

Review/Checking

- Data/Process Reviewed by:
 - o Date Reviewed:
- Documentation Reviewed by:
 - o Date Reviewed:
- Any notes from review:

Training Guides

- With detailed training guides, student research assistants can now produce complete survey summary reports

OIR Survey Report Tutorial for Research Assistants

The OIR Survey Report tutorial is broken into two parts. **Part 1** will walk you through steps to generate a survey report, apply initial formatting, and check the report content and data. **Part 2** of this tutorial will guide you through the final steps required to complete your survey report, including typical manual formatting steps, inserting appendices and appendix references into your report, and the final formatting steps.

Table of Contents

Survey Report Tutorial - Part 1	2
I. Overview	2
A. What is a survey summary report (also known as a "preview")?	2
B. What is the difference between closed-ended and open-ended survey questions, and how are they presented in a survey summary report?.....	2
C. Survey Terminology	3
II. Initial Steps to Prepare a Survey Summary Report	3
A. Programs Needed to Prepare a Survey Summary Report.....	4
B. Files Needed to Prepare a Survey Summary Report.....	4
C. Files for the Survey Summary Tutorial.....	4
D. Familiarizing Yourself with the Survey Instrument	5
III. Generating a Report in QualtricsTools	6
IV. Formatting with Macros	10
A. Importing the QualtricsTools Formatting Macros	10
B. Running the Initial Formatting Macros	12
C. Checking the Report Content and Data	15
Survey Report Tutorial - Part 2	16
V. Manual Report Formatting Steps	16
A. Word Settings to Review and Edit Report Formatting	16
B. Inserting and Editing the Survey Title and Footer	17
C. Moving "Other, please specify," "None of the above" (etc.) Answer Choices to the Bottom of the Response Tables	21
D. Sorting Multiple-Choice-Multiple-Answer Questions	22
E. Identifying Side-by-Side Matrix Questions	25
F. Inserting Landscape Pages for Wide Tables	27
G. Merging Tables for Side-by-Side Matrix Questions.....	29
H. Reformatting Multi-Page Tables.....	32
VI. Formatting Appendices & Inserting Appendix References	36
A. Running Initial Appendix Formatting Macros	36
B. Inserting Appendices at End of the Report	40
C. Identifying Text Entry Question in the Body of the Report	42
D. Inserting Appendix References into Body of the Report	44
VII. Final Report Formatting	48
A. Running Final Formatting Macros	48
B. Inserting Page Breaks between Appendix Tables	50
C. Reviewing the Final Formatting Checklist	56
D. Saving Final Report as a PDF.....	57
VIII. Appendix	58
A. Generating "split reports" or "break-out-group reports" with QualtricsTools.....	58

Key Outcomes

- Cyclical projects with thorough documentation take less time to complete each year
- Student research assistants can now independently accomplish more complex tasks
- Staff turnover has less impact on office productivity
- Training for new staff members has improved significantly

Process Automation

- Our IR office has been automating processes by leveraging our technological resources

FileMaker → NVivo

- For at least 15 years, OIR was coding open-ended survey responses using FileMaker
 - Slow, cumbersome and manual process
 - Volume of open-ended responses has been increasing; In 2017-18, more than 90,000 open-ended responses were collected and 70% of these were coded
- Coding comments is a key component of our survey reporting; clients expect it and rely upon it

Advantages of using a dedicated qualitative analysis program

User-friendly

- Easy to edit, combine, and split categories
- Tools to view summary of coded data throughout coding process

Reduces error

- Straightforward coding layout and setup
- Minimal data preparation

Standardization

- Easy to load categories from previous years, other surveys, or other questions on same survey

Communication

- Annotations and memos allow analysts and RAs to provide and implement feedback

Interactive

- Engaging coding tools (various ways of viewing data, coding, and reviewing work)

Versatile

- Supports a variety of qualitative analysis tools/methods

Excel → Tableau

- OIR has moved many cyclical data requests from Excel to Tableau to allow for improved report automation
 - Many projects can now be completed by simply updating the relevant data source
- Example: Annual address reporting requires significant data cleaning/manipulation
 - Data cleaning is completed using Tableau string calculations
 - Process has gone from taking days to hours

R and Qualtrics

- With the help of a student research assistant, OIR built an R package to analyze Qualtrics survey data

Survey Summary Reports

Tufts

Office of Institutional
Research & Evaluation

Survey Name: Sample Survey
Number of Respondents: 252

Respondent Demographics (based on SIS data)	Respondents	All Students in Population
Female	60.0%	60.3%
Male	40.0%	39.7%
American Indian or Alaska Native	0.0%	0.0%
Asian	6.9%	6.8%
Black or African American	3.3%	3.1%
Hispanic	3.4%	3.5%
Native Hawaiian/Other Pacific Islander	0.2%	0.2%
Non-resident alien	17.6%	17.5%
Two or more races	2.7%	2.6%
White	57.1%	57.0%
Unknown	8.9%	9.4%
Arts & Sciences	68.1%	68.6%
Engineering	31.9%	31.4%

Introductory Questions

1. Please indicate how recently you've eaten each of the following fruit

	N	In the last week	In the last month	In the last year
Cantaloupe	10	70.0%	50.0%	70.0%
Kiwi	10	80.0%	60.0%	50.0%
Pomegranate	10	60.0%	30.0%	90.0%

2. Please select your favorite fruit from the following options

5 50.0% Cantaloupe
1 10.0% Kiwi
4 40.0% Pomegranate

3. Please select the fruit you would voluntarily consume.

2 20.0% Cantaloupe
1 10.0% Kiwi
2 20.0% Pomegranate
8 80.0% None of the above

Office of Institutional Research & Evaluation
NAME OF SURVEY AND YEAR

1 of 2

Prepared by: ANALYST NAME
INSERT DATE

This report is intended for internal use only

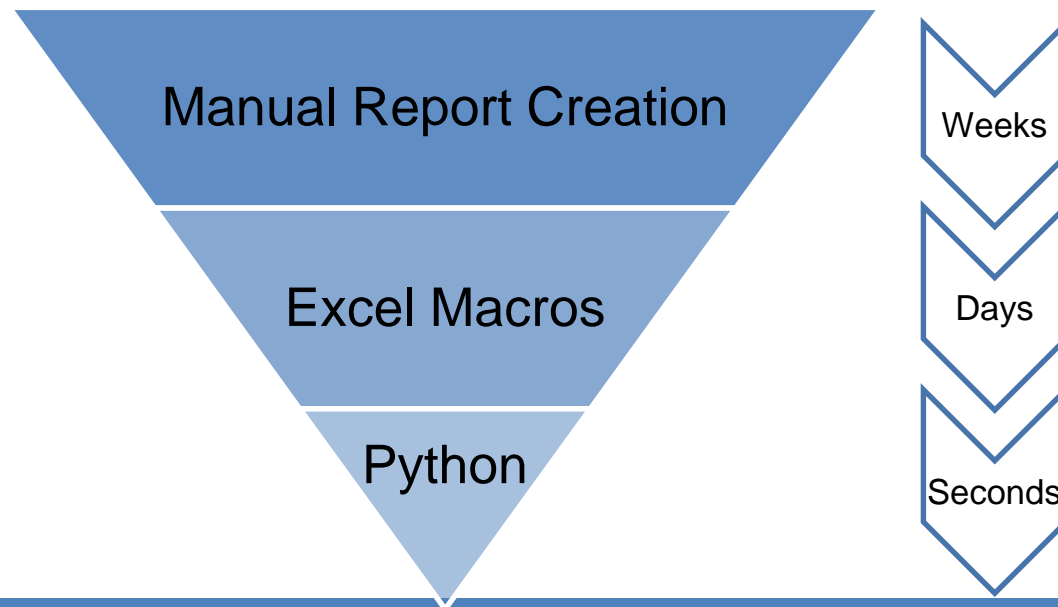

- Reports include:
 - Demographics of survey population
 - Response frequencies for all closed-ended questions
 - Appendices containing full-text responses for all open-ended questions
 - Often include tables of coded comments as well
- Often create multiple summary reports for each survey for different population groups
 - For example, created 56 summary reports for Graduate Student Exit Survey last year

QualtricsTools

- What can the QualtricsTools package do?
 - Automatically generate frequency reports of closed-ended questions
 - Table responses to open-ended questions
 - Create split reports for subgroups (e.g. school and department level reporting)
 - Reshape data for Tableau
- User-friendly interactive app; requires minimal R experience to run

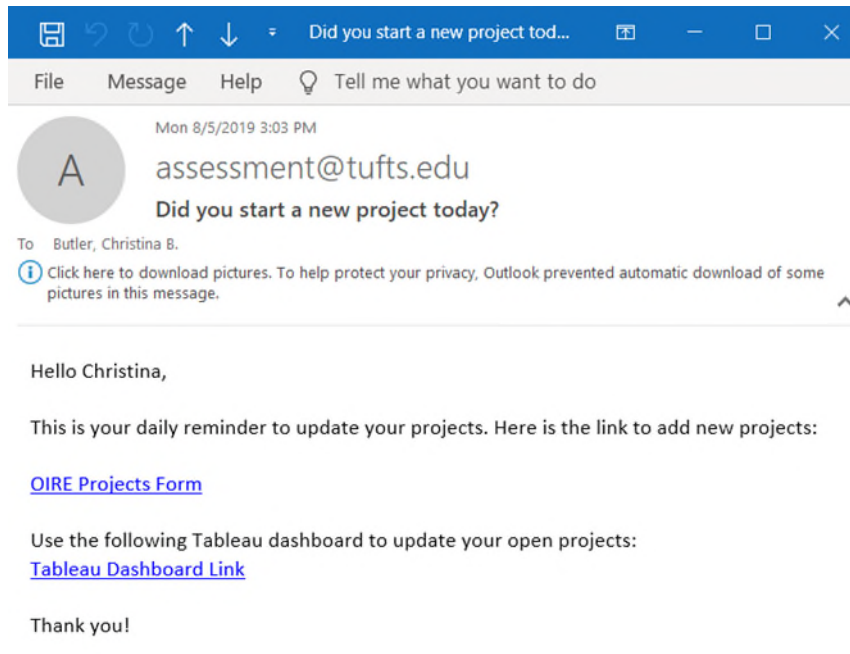

Generating Reports with Python

- Example: Every year, seniors are asked to identify three people who made a significant impact on them during their time at Tufts as well as identify an excellent course
- Approximately 1,500 reports are generated from these data

Qualtrics API

- Daily Qualtrics emails sent automatically to IR staff
- Automatically export Qualtrics csv files

Key Takeaways

- Research Assistants are working independently on more challenging projects
- Staff are less inundated with simple data requests and can focus efforts on more complex data projects
- Projects that previously took months to complete, can now be completed in days
- Training for new staff members is more effective
- Projects are more evenly distributed among staff
- OIR is working more efficiently while consistently producing accurate reports
